PROFESSIONAL SUMMARY

Full-stack Software Engineer with 3+ years building and customising scalable web, mobile, and eCommerce platforms across PHP (Laravel, Magento 2, Pimcore, WordPress) and JavaScript (React, React Native). Proven track record delivering complex enterprise migrations, custom plugin development, performance optimisation, and end-to-end system integrations for international clients. Currently pursuing an MRes in Cyber Security at the University of Wolverhampton, bringing security-aware development practices and analytical rigour into modern engineering teams. Eligible to work in the UK.

CORE TECHNICAL SKILLS

Languages: PHP, JavaScript, TypeScript, SQL, HTML5, CSS3, C, C++

Frameworks & Platforms: Laravel, Symfony, Pimcore, Magento 2, WordPress, Shopify, React, React Native, Node.js

Templating & Config: Twig, YAML, Elementor Pro

Databases: MySQL, MongoDB (queries, joins, stored procedures, indexing, optimisation)

DevOps & Tools: Docker, Git, Jira, Nginx, Apache, CI/CD, Bash scripting, AWS (basics)

Practices: REST API design & integration, plugin & module architecture, performance optimisation, technical documentation, Agile/Scrum, code review, knowledge transfer

PROFESSIONAL EXPERIENCE

Software Engineer — Javra Software Nepal

May 2024 – September 2025

Promoted to Software Engineer following Junior SE tenure. Led major eCommerce platform initiatives and took end-to-end ownership of enterprise WordPress engagements.

- Led a large-scale **Pimcore 6.9 → 10.5 migration** for a major international eCommerce platform, where Pimcore served as the **central PIM (Product Information Management) data hub feeding a Magento 2 storefront**. Migrated thousands of data objects and class definitions, refactored API integrations between Pimcore and Magento, updated Twig-based admin interfaces, and delivered across a multi-month engagement.
- Reduced post-migration **indexing time from ~1 hour to a fraction** of the original through query optimisation, cache strategy, and refactored data models — accelerating product data sync to the Magento storefront.
- Owned **knowledge transfer** for the migrated PIM platform: onboarded the incoming development team and produced comprehensive technical documentation covering data models, API contracts, and deployment workflows.
- Architected and built a **corporate website on WordPress** with Elementor Pro, including a custom-coded **bi-directional integration with an internal HRM system** — job postings synced both ways, with applications triggering automated email and in-app notifications to HR and operations teams.
- Took ownership of an enterprise **WordPress learning platform** (member-gated video training portal for industrial machinery), drastically improving load times by **replacing bloated third-party plugins with leaner custom-built equivalents** preserving identical functionality.
- Translated Figma designs into pixel-accurate, responsive frontends with custom backend logic; collaborated directly with designers, HR, operations, and non-technical stakeholders to convert business requirements into delivered features.
- Mentored junior team members on Pimcore architecture, Twig templating, and WordPress plugin development.

Junior Software Engineer — Javra Software Nepal

August 2022 – April 2024

- Developed features and resolved complex bugs across multiple Pimcore-based eCommerce platforms using PHP, Symfony, Twig, and YAML configuration.
- Containerised local and staging environments with Docker; configured Nginx and Apache for development and deployment workflows.
- Worked directly with international stakeholders, providing daily progress updates and clarifying technical requirements in agile ceremonies.
- Implemented backend logic, REST API endpoints, and frontend enhancements for enterprise clients.

PHP Intern — Javra Software Nepal

May 2022 – July 2022

- Completed structured training in LAMP stack, OOP PHP, MVC architecture, Git workflows, and Magento 2 fundamentals.
- Built a full-stack CMS blog system from scratch using OOP PHP and MVC as a capstone project.

FREELANCE & CONTRACT EXPERIENCE

Software Engineer (Freelance) — HiveCraft, Kranita Infotech, DevInfo Express

2024 – 2025 (alongside Javra Software)

- **HiveCraft Technology** — Delivered diverse client projects spanning Shopify customisations, Laravel feature development, and **custom Magento 2 plugins including payment gateway integrations**. Designed plugin architecture from the ground up, debugged production issues, and improved page load and checkout performance.
- **Kranita Infotech** — Designed and built a complete **React Native mobile application, "One-Stop Employee Management — Clock-In to Payslip"**, owning UI implementation, REST API integration, performance tuning, and store deployment.
- **DevInfo Express** — Built and customised WordPress sites, integrated **DoorDash APIs**, and improved Core Web Vitals and SEO performance.
- Automated repetitive build, deployment, and data tasks using Bash scripting across all engagements.
- Optimised performance across Magento 2, WordPress, and React Native through caching strategy, asset loading improvements, and code-level refactoring.
- Acted as direct point of contact with clients, translating business needs into scalable technical solutions.

ADDITIONAL EXPERIENCE

Coding Tutor — APTECH Computer Education Pvt. Ltd., Nepal

2019 – 2021

- Taught HTML, CSS, JavaScript, jQuery, Python, Data Structures, Microsoft Office, and Advanced Excel to students of varied backgrounds.
- Simplified complex programming concepts using real-world examples and project-based learning.
- Consistently received strong student feedback for clarity, patience, and tailored guidance.

EDUCATION

Master of Research (MRes), Cyber Security — University of Wolverhampton, United Kingdom

September 2025 – September 2026 (Ongoing)

Focus: security architecture, digital investigation, secure software development, data analysis, and research methods.

BSc. Computer Science and Information Technology (CSIT) — Himalaya College of Engineering, Tribhuvan University, Nepal
Graduated 2021

CERTIFICATIONS & TRAINING

- Introduction to Cloud Computing — Coursera (September 2024)
- Introduction to DevOps — Coursera (March 2024)
- JPMorgan Chase Software Engineering Job Simulation
- Javra Nepal Hackathon — Javra Software (May 2024)
- JavaScript Full Course — Udemy (October 2019)
- WordPress Website Development for Beginners — Udemy (May 2020)
- Userfeel Certified Tester | Google Digital Garage

ADDITIONAL INFORMATION

Right to work: Eligible to work in the UK (20 hrs/week during term time, full-time during university holidays).

Open to roles: Software Engineer, Full-stack Developer, PHP/Laravel Developer, Magento Developer, React/React Native Developer.

Interests: Secure software development, performance engineering, eCommerce architecture, data-driven systems.

References: Available upon request.
